

Apricus Australia: An Introduction

Become part of the solution..

Apricus Australia is focused on providing effective solar hot water solutions for families and businesses concerned about rising energy costs and climate change.

*Installing just one
Apricus Solar
thermal collector
can reduce CO2
levels as much as
planting more than
200 trees.*

Who is Apricus?

The Apricus Solar Company was founded in 2003. Since the launch of Apricus Australia in 2005, and under the direction of Chris Taylor, Apricus has experienced significant growth as the demand for reliable, high quality and highly efficient solar solutions increases world wide. Apricus Australia products are proudly designed, manufactured and warranted by Apricus, complying with key Australian and international standards, and distributed globally to over 30 countries.

Over the past year Apricus Australia has worked with a number large industry names such as Carlyle Gardens and the Seventh Day Adventist, to provide solar hot water to over 500 homes across a number of retirement villages in Australia.

The Product

The Apricus solar collector is a highly efficient thermal solar system, suitable for both domestic and commercial heating. Taking advantage of the efficiency benefits provided by evacuated tubes combined with heat pipes and glass wool insulation, the Apricus solar collector represents the latest and most efficient thermal solar technology.

The Apricus Advantage

At Apricus we are passionate to ensure our Solar Hot Water Systems are right for you. Through our research and development and focus on the highest quality of customer service we believe Apricus Australia is the first choice for Solar Hot Water.

Excellent Cold Weather Performance

Apricus collectors can perform well even in freezing conditions thanks to thick glass-wool insulation within the manifold and vacuum insulated evacuated tubes. Apricus systems installed in Canada operate at minus 40 degrees Celsius!

Passive Tracking of the Sun

Apricus collectors are designed with a round surface that can passively track the sun, ensuring greater solar performance for longer every day,

Lightweight and Durable Design

Due to the fact that there is no water held in the tubes themselves the system is able to be installed by a single plumber. There is also no need to strengthen a healthy roof as the average system only weighs around 120kg.

Save on your Energy Bills

Installing an Apricus Solar Hot Water System is not only beneficial for the environment but can reduce your hot water bill by up to 80%!

The efficiency of the system guarantees one of the fastest payback periods of any Solar Hot Water System on the market.

Maintenance Free

Given the design of our evacuated tube system it is rarely necessary for any cleaning or maintenance to be needed. The occurrence of lichen growth or moss is not an issue unlike other solar hot water systems.

Longest Industry Warranty

With 15 years coverage on all key system components, Apricus holds the longest warranty of any system on the Australian market.

Independent Reports have also shown that an Apricus System lasts much longer than any others on the market (30 years probable life on the Apricus AE-250-30).

Flexible Installation Options

Our trained installers ensure that your system is mounted at the correct angle to provide optimum solar contribution all year round.

*Using the sun's
energy to heat
water can reduce
an average
household's hot
water bill by
up to 80%*
